A New Partnership for European Cities, Universities, NGOs. National and European Governmental Organisations.

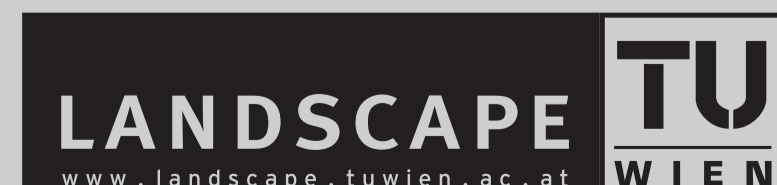

The urban landscape is a vital strategic asset of Europe's cities and home to at least three quarters of the 800 million Europeans. To reach its full potential the urban landscape needs to be understood and planned as an integrated whole.

By bringing together specialists from across Europe the European Urban Landscape Partnership aims to create the necessary critical mass of experience and expertise to support the implementation of the Council of Europe's European Landscape Convention in urban areas and to provide the integrated approach called for in the European Union's 'Thematic Strategy for the Urban Environment'

The European Urban Landscape Partnership will promote European Cooperation in the Planning, Design, Management and Protection of Europe's Urban Landscapes, bringing together individuals representing theory and practice, policy and research, politicians and the public.

Register your interest to become a part of the Partnership now at www.urban-landscape.net

The European Urban Landscape Partnership is an initiative within the context of the LE:NOTRE+PLUS Thematic Network Project
